

Addressing today's content management challenges within the enterprise

Today's commercial enterprises and government agencies face significant challenges as they strive to meet the rapidly growing need to manage thousands, and sometimes millions, of documents generated throughout the normal course of business operations—all while increasing end-user productivity and lowering IT costs.

For many organizations, traditional approaches to enterprise content management center on software applications from proprietary vendors that are expensive, difficult to deploy and costly to maintain. Moreover, most of today's legacy content management systems were built prior to the development of the institutional IT infrastructure components and standards that we now take for granted. Shared network drives are sometimes used to manage enterprise documents and content, but this approach can quickly grow out of control.

In short, the lack of document management facility and efficiency in most organizations often leads to miscommunication, lost information, and disorganized or inefficient workflow—all of which result in project delays, wasted time and redundant effort, not to mention frustrated employees, partners and customers.

Rivet Logic—Enabling content management for the masses

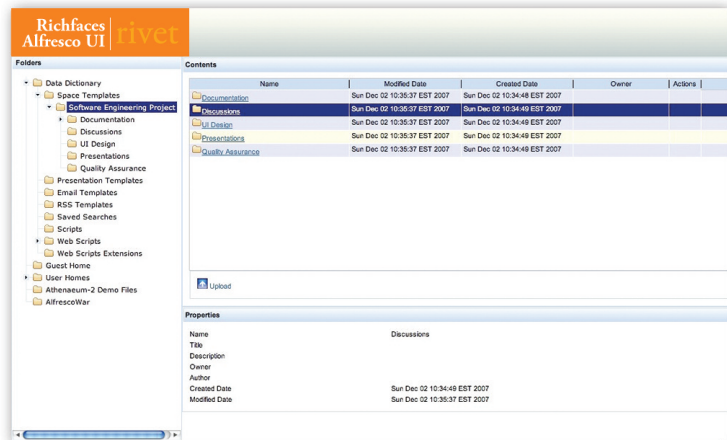

Rivet Logic addresses many of today's workplace challenges with Enterprise Content Management (ECM) Solutions that enable organizations to transform traditional content repositories and static intranets into dynamic, collaborative work environments through an array of open

source functionality. Through effective digital content management, streamlined workflow, optimized search and retrieval capability, and social media integration across the enterprise, Rivet Logic's ECM Solutions result in accelerated end-user adoption, increased productivity, cost savings, and optimal business value.

Increase productivity through flexible, rapidly deployed content management solutions

Every enterprise has its own unique needs, processes and compliance challenges. Yet most off-the-shelf content management solutions fail to meet these varying organizational needs. Built upon best-of-breed open source technology, Rivet Logic's ECM Solutions enable organizations of any kind to introduce a wide range of capabilities into the enterprise cost effectively, including the following:

- Document management: Whether dealing with documents, corporate records or scanned images, Rivet Logic delivers a wide range of capabilities and functions designed to support the entire document lifecycle and increase productivity. From automatic versioning and check-in/check-out processes to managing and scheduling document events, each solution may be customized to address your unique business needs.

Richfaces UI—Enabling component-rich content management for Alfresco

CAPABILITIES

- User-friendly interfaces with Common Internet File System (CIFS) Protocol and WebDAV support
- Social media functionality and integration, including portals, wikis, blogs and forums, that drives productivity
- Rules-based document repositories that ensure version control and easy file check-in/check-out functionality
- Automatic email alerts, and search and retrieval tools that increase end-user efficiency
- Records management functionality that supports document event scheduling
- Best-in-class security with authentication and permission levels to accommodate varying user roles

- **Enterprise search:** Project information and digital content is of little value if it can't be obtained easily. Quick access to information is vital to productivity and efficiency. Rivet Logic's integrated information retrieval solutions enable searches across multiple repositories, including traditional enterprise content archives as well as social media content sources, including portals, wikis, blogs and forums.
- **Security:** Open, unsecured access to sensitive or proprietary documents can result in inadvertent edits, deleted files or, worse, malicious corruption. Rivet Logic's secured content management solutions begin with strong authentication, either through permission-based access or assigned user roles that grant varying levels of access.
- **Workflow:** Workflow functionality ensures that the right person is working on the right task at the right time. A good workflow engine will automatically send out individualized notifications or alerts when a document needs review, editing and/or approval. Rivet Logic deploys flexible and easy-to-configure workflow definitions that accommodate a wide variety of business documents and organizational processes.
- **Document imaging and scanning:** Successful enterprise content management systems must support physical documents that are scanned as images with the same effectiveness as those that are generated from desktop applications. Through rapid customization, Rivet Logic integrates scanning platforms and scanners in order to support all enterprise workflow associated with scanned documents.

Optimize collaboration through social media and user-generated content integration

Portals, wikis, blogs, forums and other forms of user-generated content and social media environments enable organizations to take otherwise document-and content-centric enterprises to the next level through collaboration and project-enabling capability. Portal integration, for example,

enables project teams to create workspaces, and share task lists and calendars. Wikis provide a user-friendly mechanism for teams to share information and collaborate on any type of project. Organizations that leverage open source portal and wiki functionality, and integrate it into the enterprise, realize dramatic productivity gains.

Enterprise Content Management Solutions by Rivet Logic—Cost-effective open source solutions that maximize ROI

As your organization's digital information continues to grow geometrically, Rivet Logic's uniquely tailored solutions will help you harness the power of your content. Enterprise Content Management Solutions by Rivet Logic provide end-users with the tools and access they need to innovate and propagate faster in ways that greatly benefit IT departments. Rivet Logic's deep experience with open source content management solutions across multiple vertical markets improves productivity and the bottom line.

Supported Open Source Platforms

- Alfresco ECM
- JBoss
- Liferay Portal
- Mule ESB
- My SQL
- Ingres

Featured Partners

As the leading Professional Services Partner for the Alfresco open source ECM platform, Rivet Logic leverages real-world experience gained from more than 20 successful implementations to offer expert architectural design, customization, integration and support services.

Rivet Logic provides expert support and consulting services for Red Hat's JBoss Enterprise Middleware. As a Red Hat Advanced Business Partner, Rivet Logic helps clients design, develop, integrate, orchestrate and deploy next-generation enterprise applications.

BENEFITS

- Lower costs and dramatically improve ROI by redirecting IT dollars to revenue-generating business functions
- Easily deploy, migrate content and integrate with existing enterprise applications, workflows and business processes
- Ensure business user adoption with seamless and consolidated content repositories and easy-to-use interfaces
- Lower customization and development costs with open standards and interfaces
- Streamline workflow with records and email lifecycle management across all departments, business units and offices
- Reduce costs through zero licensing fees, no forced upgrades or vendor "lock-ins"
