

Innovative collaboration and community functionality drives organizational success

Just as social networking, blogs and forums are changing the way consumers connect, share information and make buying decisions, Enterprise 2.0 technologies and business processes are beginning to free workforces from the constraints of traditional communication and productivity tools. As a result, employees are accessing information faster, collaborating across the enterprise with greater ease, and gaining a competitive advantage through increased productivity and flexibility.

For many organizations, collaboration and community tools within the enterprise are either nonexistent or based on legacy systems that are difficult and costly to maintain. Uniting employees, business partners and other stakeholders into one dynamic, collaborative ecosystem provides significant benefits, including accelerated project workflow, greater opportunity for innovation, and optimal brand value through unified messaging across all communication channels.

Rivet Logic—Leveraging the power of collaboration to deliver enterprise-wide advantages

Rivet Logic addresses today's workplace challenges with Enterprise Collaboration and Community (ECC) Solutions that enable organizations to transform traditional, static intranets into dynamic, collaborative work environments through an array of open source portal and user-generated content functionality. By connecting employees with each other, and with customers and other stakeholders through open source collaboration and community-building tools, Rivet Logic helps increase workflow efficiency, facilitate

knowledge sharing and, ultimately, drive innovation and business value.

Increasing productivity and streamlining workflow through flexible collaboration and community functionality

Companies today recognize that bringing community and collaboration functionality into the enterprise produces tremendous business value. Yet most off-the-shelf enterprise content management solutions rarely offer the flexibility and agility needed to meet the growing list of organizational needs. Built upon best-of-breed open source technology, Rivet Logic's ECC Solutions enable organizations to fully harness a wide range of community and collaboration functionality across an array of enterprise-wide initiatives, including:

- **Intranets:** Many organizations today are adopting Enterprise 2.0 functionality to transform static command-and-control intranets into dynamic work environments that facilitate community and collaboration. Through enabling features such as blogs, wikis, forums, RSS and email feeds, as well as search and retrieval capability, Rivet Logic's ECC Solutions are allowing organizations to provide more timely information to employees and facilitating more meaningful communication. Introducing community and collaboration functionality at the intranet

CAPABILITIES

- Scalable social media and project collaboration functionality and integration for enterprise-wide intranets or specific internal communities
- Portal framework that enables users to fully leverage collaboration tools in an enterprise setting
- Rules-based document repositories that ensure version control and easy file check-in/check-out functionality
- Integration of email and status alerts, time tracking functionality, and other tools that optimize project management efficiency
- User-friendly interfaces with Common Internet File System (CIFS) Protocol and WebDAV support
- Best-in-class security with authentication and permission levels that can accommodate varying user roles

level achieves numerous business advantages, including faster and more cost-effective workflow, and greater innovation through flexible communication solutions that connect people and ideas.

- **Internal communities:** Today's enterprises and intranets are evolving from monolithic entities into team-oriented subcultures of product lines and revenue sources that may be organized according to skill, function or department, among other criteria. Rivet Logic understands that building internal employee communities within the enterprise offers tremendous strategic business and operational advantages. Rivet Logic's ECC Solutions are designed to facilitate communication, employee interaction and feedback through industry-leading open source platform capability.
- **Portal implementation:** As a single access point to a wide array of content and applications, portals streamline the flow of information and increase productivity. Rivet Logic's ECC Solutions seamlessly integrate portal functionality into existing enterprise systems to further facilitate communication, interactivity and workflow. From forums and blogs to project management tools such as task lists and calendars, our portal solutions offer tremendous value by consolidating project-specific information and easing search and retrieval capability.
- **Project collaboration:** In today's work environment, employees, departments and teams, often dispersed across multiple physical locations, are tasked with many projects, making it difficult to collaborate, manage file versions, track progress and complete tasks on schedule. Facilitating a unified organizational vision is the key to project success. Through an array of best-of-breed open source project collaboration tools, Rivet Logic's ECC Solutions streamline workflow, promote effective communication among employees and, ultimately, enable teams to bring projects in on time and under budget. Whether

integrating features into an existing platform or building a collaborative environment from the ground up, Rivet Logic customizes collaboration solutions to fit your unique needs.

Enterprise Collaboration and Community Solutions by Rivet Logic—Transforming employee communication into a strategic advantage

Managing projects and facilitating open communication between partners and customers, and across multiple departments and physical locations, requires a strategic approach to collaboration and community functionality. Rivet Logic's uniquely tailored open source solutions enable innovation and project success through best-of-breed tools and seasoned development expertise. Rivet Logic's deep experience across multiple vertical markets results in accelerated problem/resolution cycle times, rapid customization and optimal ROI.

Supported Open Source Platforms

- Alfresco ECM
- JBoss Enterprise Middleware
- Liferay Portal
- My SQL
- PHP
- Ingres
- Mule ESB

Featured Partners

As a Preferred Partner for Liferay, Rivet Logic offers extensive Liferay Portal expertise. Our portal solutions provide a robust, easy-to-maintain and cost-effective alternative to proprietary applications.

As the leading Professional Services Partner for the Alfresco open source ECM platform, Rivet Logic leverages real-world experience gained from more than 20 successful implementations to offer expert architectural design, customization, integration and support services.

BENEFITS

- Lower costs and dramatically improve ROI by redirecting IT dollars to revenue-generating business functions
- Easily deploy, migrate and integrate content with existing enterprise applications, workflows and business processes
- Ensure business user adoption with seamless and consolidated content repositories and easy-to-use interfaces
- Reduce customization and development costs with open standards and interfaces
- Streamline workflow with records and email lifecycle management across all departments, business units and offices
- Realize cost savings through zero licensing fees, no forced upgrades or vendor "lock-ins"
