

Migrating to Amazon Web Services (AWS): How to Get Started

Do you want to migrate your business systems to Amazon Web Services (AWS), but don't know how to get started?

Organizations large and small are increasingly moving their mission critical business systems to the cloud, whether it's to reduce cost or allow their internal IT team to focus on other strategic initiatives. Making the decision to move to the cloud is only the first step. But what happens next?

Just because you've made the decision to make the big move, doesn't mean you necessarily know how to go about doing it. Having the right strategy in place and setting up a proper migration plan is critical to the

outcome of your cloud migration initiative. And even those who already have a strategy in place often find their internal expertise and resources limited, and end up looking to external partners for help.

Whether you're just starting out or you already know what you want, Rivet Logic serves as a trusted partner on your cloud migration journey. Accelerate your move to the cloud while getting the most value out of your mission critical deployments by maximizing all that the cloud has to offer.

What Makes Us Different?

AWS Expertise – Your mission critical business systems should only be trusted on a secure and reliable cloud platform. That's why we've partnered with AWS to help our customers deliver sophisticated applications with increased flexibility, scalability and reliability. And because we take care of the migration process end-to-end, there's zero learning curve for you. Even more, all of our Managed Services team members are AWS Certified, so you can rest assured and go about your business worry-free.

Streamlined Automation – Our Managed Services team has found a way to automate processes that are typically performed manually, which means minimized human error and increased process reliability and repeatability. This translates to the same high quality services at a lower cost for our customers.

Application Support – Traditional Managed Services Providers lack the expertise for application specific support, meaning your IT staff still needs to be trained on those applications. Our Managed Services team has the application expertise necessary to properly configure and administer your deployment so you don't have to.

Our end-to-end consulting services can be tailored to fit your unique business needs

- Discovery to prioritize and plan your cloud initiatives to align with your business goals
- Assess your IT infrastructure and systems to determine the best migration approach (lift-and-shift, update, or new build)
- Cloud migration through our streamlined and automated processes
- Managed Services with application specific support to further simplify your deployment
